

次の計算をしましょう。

$$(1) \frac{2}{3} \div \frac{3}{6} = \frac{2 \times \overset{\square}{\cancel{6}}}{\underset{\square}{\cancel{3}} \times 3} = \frac{\square}{\square}$$

$$(2) \frac{4}{9} \div \frac{5}{3} = \frac{4 \times \overset{\square}{\cancel{3}}}{\underset{\square}{\cancel{9}} \times 5} = \frac{\square}{\square}$$

$$(3) \frac{3}{8} \div \frac{7}{4} =$$

$$(4) \frac{5}{12} \div \frac{7}{6} =$$

$$(5) \frac{3}{14} \div \frac{8}{7} =$$

$$(6) \frac{5}{16} \div \frac{5}{12} =$$
