

次の計算をしましょう。

$$(1) \frac{1}{4} - 0.1 = \frac{1}{4} - \frac{1}{10} = \frac{5}{20} - \frac{2}{20} = \frac{3}{20}$$

$$(2) \frac{2}{3} - 0.2 = \frac{2}{3} - \frac{\cancel{2}^1}{\cancel{10}_5} = \frac{10}{15} - \frac{3}{15} = \frac{7}{15}$$

$$(3) 0.6 - \frac{2}{5} = \frac{\cancel{6}^3}{\cancel{10}_5} - \frac{2}{5} = \frac{1}{5}$$

$$(4) 0.7 - \frac{3}{8} = \frac{7}{10} - \frac{3}{8} = \frac{28}{40} - \frac{15}{40} = \frac{13}{40}$$

$$(5) \frac{4}{7} - 0.5 = \frac{4}{7} - \frac{\cancel{5}^1}{\cancel{10}_2} = \frac{8}{14} - \frac{7}{14} = \frac{1}{14}$$

$$(6) \frac{2}{7} - 0.25 = \frac{2}{7} - \frac{\cancel{25}^1}{\cancel{100}_4} = \frac{8}{28} - \frac{7}{28} = \frac{1}{28}$$
