

次の計算をしましょう。

$$(1) \frac{3}{5} - 0.3 = \frac{3}{5} - \frac{3}{10} = \frac{6}{10} - \frac{3}{10} = \frac{3}{10}$$

$$(2) \frac{5}{12} - 0.4 = \frac{5}{12} - \frac{4^2}{10 \times 5} = \frac{25}{60} - \frac{24}{60} = \frac{1}{60}$$

$$(3) 0.9 - \frac{5}{8} = \frac{9}{10} - \frac{5}{8} = \frac{36}{40} - \frac{25}{40} = \frac{11}{40}$$

$$(4) 0.31 - \frac{2}{7} = \frac{31}{100} - \frac{2}{7} = \frac{217}{700} - \frac{200}{700} = \frac{17}{700}$$

$$(5) \frac{5}{9} - 0.27 = \frac{5}{9} - \frac{27}{100} = \frac{500}{900} - \frac{243}{900} = \frac{257}{900}$$

$$(6) 0.418 - \frac{2}{5} = \frac{418}{1000} - \frac{2}{5} = \frac{209}{500} - \frac{200}{500} = \frac{9}{500}$$
